## SCARABÆUS MACROPUS.

### CHARACTER GENERICUS.

Antennæ clavatæ capitulo fiffili. Tibiæ anticæ fæpius dentatæ.

LIN. SYST. NAT. p. 541.

#### CHARACTER SPECIFICUS.

Scarabæus fcutellatus viridis nitens, fubtus cupreo-auratus, pectore porrecto, femoribus posticis crassissimis.

INSECTUM hoc, formæ infolitæ, et eximiæ pulchritudinis, nullus unquam descripsit physicus. Creditur porro non aliud extare Specimen præter id quod depinximus, ab Ulysippone in Angliam illatum; quodque generasse aiunt Potosos in America Australi. Ostendit tabula naturalem insecti magnitudinem.

## THE KANGUROO BEETLE.

### GENERIC CHARACTER.

Antennæ divided at the tip or head into several lamellæ. Tibiæ, or second joints of the fore-legs, generally toothed.

### SPECIFIC CHARACTER.

Scutellated bright-green beetle, gold-coppery beneath; with projecting breaft: the thighs of the hind-legs very thick.

THIS highly fingular and beautiful infect, which has not as yet been described by any systematic Naturalist, and of which the Specimen itself is unique, was received from Lisbon; and is supposed to be a native of Potosi, in South America. It is represented in its natural size.
